

Portable crusher, portable impact crusher, portable crusher's main structures

Portable impact crusher: To avoid the obstacle the crushing site and environments brought to our clients, Shanghai Shibang Group have devoted plenty of labour and resource to the research on the Portable series mobile crusher plant for two years. And the appearance of Portable series mobile crusher plant expands the concept field in coarse crushing and fine crushing and really supply simpler, higher efficient, lower cost machines for clients. **Portable impact crusher** plant includes: Jaw crusher series, Impact crusher series, Cone crusher series.

Main structures of Portable impact crusher

- 1 conveyor
- 2 vibrating screen
- 3 vibrating screen motor
- 4 cone crusher
- 5 cone crusher motor
- 6 electric control cabinet

Technical Features of Portable impact crusher

Large crushing ratio, high-efficiency and adaptability, crushing and screening processing, automatic transmitting, mid & fine strong crushing.

Products Advantages of Portable impact crusher

1 Integrative equipment group: The form of integrative installment reduces the installation of the complex infrastructure and accessory equipment, lower the consumption of materials and man-hour.

2 Flexibility: The vehicle chassis of the portable type series mobile crusher is high and turning radius is small, which is convenient to transport on common road and more convenient on road of the crushing place. It saves the time to enter the working place. It is also propitious to enter the reasonable working place and supplies the space for all of the crushing flow.

3 Lower freight cost: The portable type series mobile crusher can crush materials at primary site and remove transportation from the primary site to crushing place, which lower the freight cost. In addition, extended equipment group conveys the materials to the designated belt conveyor directly.

4 Direct and efficient operation: Integrative portable type series mobile crusher can be used independently and supply the flexible design to satisfy users' requirements such as mobile crushing, mobile screen and so on, which is according to requirements of raw materials and final products.

5 Easy to adapt and flexible to collocate: Portable type series mobile crusher supplies the shortcut and low-cost integrative equipment configuration. It can work independently or jointly according to the coarse or fine crushing and screening system. Side hopper supplies the flexibility for the materials transportation. Diesel engine generator of integrative configuration not only supplies power but also jointly supplies power for whole flow integrative group specially. Portable type series mobile crusher supplies the shortcut and low-cost integrative equipment configuration. It can work independently or jointly according to the coarse or fine crushing and screening system. Side hopper supplies the flexibility for the materials transportation. Diesel engine generator of integrative configuration not only supplies power but also jointly supplies power for whole flow integrative group specially.

6 Reliable performance and convenient maintenance: PE, PF or HP series crushers in the portable type series mobile crusher feature high crushing ratio, multifunction, fine products, reasonable structure design and excellent crushing performance. Reliable quality better satisfy the requirements of coarse, medium and fine crushing and screening. **Portable impact crusher** enjoys the high quality reputation at home and abroad. Portable type mobile crusher not only

features mature technology and easy maintenance, it also has good adaptability and safety to conveyed quantity, size of materials and erosion. Integrative system makes it easy to install and maintain, which in turn ensure its high durably and efficiency.

Sales Hot-line

International trade Dept. Tel: 0086-21-51860270

Office Add

Jianye Road, South Jinqiao Area, Pudong New Area, Shanghai, China.
